**THE MEKCO BREAKTHROUGH
IN MOVING AND STORING
TURBINE ROTORS**

THE PROBLEM

MOVING AND STORING TURBINE ROTORS ECONOMICALLY

As power plant maintenance staff are experiencing, the handling and storing of turbine rotors is a costly problem with few alternatives or solutions.

THE SOLUTION

MEKCO TURBINE ROTOR STORAGE SYSTEMS

Mekco, an industry leader in plastic and metal fabrication, has developed a revolutionary system for handling and storing turbine rotors on your premises - -

- **QUICKLY**
- **SAFELY**
- **ECONOMICALLY**

350,000 pound turbine rotors and Mekco's custom engineered stands are transported by specially modified rail cars to a remote on-premise site. The turbine rotors and stands can remain on the special rail cars for storage, or they can be placed on concrete pads indefinitely. The rotors are then covered with Mekco's custom-designed, weatherproof enclosures, guaranteed to meet the most stringent specifications.

THE BOTTOM LINE

**PRICED
AT A FRACTION OF
THE COST OF OTHER
STORAGE OR
DISPOSAL METHODS**

Mekco's solution is remarkably economical, especially when compared to the cost of decontaminating or burial.

It is also an ideal method for storing new turbine rotors until needed.

We've designed a system that works, giving our customers confidence in a proven product and a proven track record.

THE SPECIFICATIONS

MEET THE TOUGHEST REQUIREMENTS

Each free-standing, self-contained
Mekco enclosure is:

- CORROSION AND
CHEMICAL RESISTANT
- AIR AND WATERTIGHT
- LIGHTWEIGHT
- ENVIRONMENTALLY AESTHETIC
- WEATHERPROOF

[withstands 100 MPH winds and
snow loads of 35# PSF]
